## SUMMARY

Computer Science graduate (2025) who builds Python REST APIs, deploys them with Docker and CI/CD, and runs them on AWS. Helped migrate a Java 17 application to AWS during a cloud/DevOps internship, writing the Terraform and diagnosing deployment failures. Now builds FastAPI services and LLM applications, including a RAG API with source citations.

## SKILLS

**Languages:** Python, SQL, Bash, HTML/CSS, Java (basics)

**Backend & Testing:** FastAPI, Flask, REST APIs, OpenAPI, SQLAlchemy, MySQL, Pytest (unit testing), Git/GitHub

**Cloud & DevOps:** AWS (EC2, S3, IAM, VPC, ALB, Auto Scaling, CodeDeploy, CloudWatch, WAF), Boto3, Terraform, GitHub Actions, Jenkins, Docker, Kubernetes, Helm, Linux, Prometheus, Grafana

**AI/ML:** LangChain, RAG, FAISS, sentence-transformers, TensorFlow, OpenCV, pandas, NumPy

**Fundamentals:** Object-Oriented Programming (OOP), Data Structures & Algorithms, root cause analysis, runbooks

## EXPERIENCE

**Cloud & DevOps Intern** — TechEazy Consulting — Oct 2025 – Dec 2025

- Helped migrate an on-premises Java 17 / Spring MVC application to AWS, working with developers and QA in Agile sprints.
- Wrote Terraform for the full AWS stack (VPC, subnets, security groups, ALB, Auto Scaling, S3, IAM), making it reproducible.
- Configured auto scaling up to 10 EC2 instances at 60% average CPU, behind an ALB that routes traffic only to healthy instances.
- Automated releases with a GitHub Actions and CodeDeploy pipeline that builds with Maven and deploys on every push to main.
- Diagnosed IAM permission-boundary and CodeDeploy lifecycle-hook failures from CloudWatch logs; documented the fixes in RCA notes and team runbooks.
- Automated operational tasks with Python (Boto3), Bash and Helm charts, and configured AWS WAF rate-limiting and geo-blocking rules.
- Authored the architecture design document (requirements, data storage and retrieval, cost) and set up Prometheus and Grafana monitoring for EC2 instances and Azure VMs.

**Cloud Associate Engineer Intern** — TechnoGrowth Software Solutions — Dec 2023 – Jan 2024

- Configured Docker containers and Linux servers for development and staging; ran post-release checks and wrote onboarding docs.

## PROJECTS

**Project Health Reporting Agent** | Independent, 2026 — github.com/kailashji24/project-health-reporting-agent

- Built a Python/pandas pipeline that turns Microsoft Project exports into schedule, risk and critical-path metrics, tested on 2 real workbooks (286 and 366 tasks).
- Designed a rule-based Red/Amber/Green scoring engine (7 weighted components, 26 YAML rules), keeping the LLM to explanation only so every status is auditable.
- Served it via FastAPI with an hourly job that generates JSON reports, PowerPoint decks and a portfolio roll-up; covered by 11 Pytest unit tests.

**LLM Document Q&A API (RAG)** | Independent, 2026 — github.com/kailashji24/llm-document-qa-rag

- Built a proof-of-concept RAG API (LangChain, FAISS, Groq Llama 3.1) that answers PDF questions, citing file, page and chunk.
- Exposed it via FastAPI with OpenAPI docs and request validation, returning clear errors when the vector index or LLM is down.
- Containerized it with Docker and deployed it to a local Kubernetes cluster (Docker Desktop) with health probes and resource limits; added GitHub Actions CI on every push and pull request.

**Student Registration Web App** | Independent, 2026 — github.com/kailashji24/flask-student-registration-devops

- Built a Flask and MySQL web-based data collection system for student registrations, with full CRUD and server-side validation.
- Ran it with Gunicorn and Docker Compose (MySQL health-check gate, persistent volume), and set up a Jenkins pipeline that clones the repo, builds the Docker image and redeploys the container.

**Suspicious Activity Detection** | Academic, 2024–25 — github.com/kailashji24/Suspicious-Activity-Detection

- Trained a TensorFlow/Keras LRCN (CNN + LSTM) model that classifies walking, running or fighting videos at 82.67% test accuracy.
- Built a Streamlit and OpenCV app for video upload, annotated output video and prediction logging.

## EDUCATION

**B.E., Computer Science Engineering** — PREC, Savitribai Phule Pune University, Loni | CGPA 7.90/10 — 2025

## CERTIFICATIONS

- Advanced Certification in Cloud Computing and DevOps — iHUB DivyaSampark, IIT Roorkee & DST, Govt. of India (Jul 2025)
- AWS Solutions Architect – Associate level course — Intellipaat (Mar 2025)

## PUBLICATION

- Co-author, “Investigation on Human Activity Recognition using Deep Learning,” IRJMETS, Vol. 07, Issue 02, Feb 2025.
